 **Insert backup target now**
If you plan to backup to an external USB drive, plug it in now and we will configure protection with the recommended settings for you. You will be able to change the default configuration later.

Skip this, I will configure backup later

Veeam Agent for Microsoft Windows ✕

 **Installation completed successfully**
We recommend that you create Veeam Recovery Media now

Why is this important?
If you ever need to restore the entire computer, this media will allow you to boot into the recovery environment and initiate so-called Bare Metal Restore. And to ensure smooth recovery, we can even include device drivers and network settings from your computer into the image. Thus, we recommend that you create the media on your own computer, and keep it handy.

Run Veeam Recovery Media creation wizard

Finish
